

COSC 2P95 – Lab Exercise 10 – Bash

Lab Exercises are uploaded via the Sakai page.

Since you only need to upload a single thing, there's no need to zip it up.

All you need to do is to write a *Bash script* that:

- Can be run (duh)
- Uses the **correct line endings**
- Displays (using `diff`) the differences between the source files at the following addresses:
 - `http://www.cosc.brocku.ca/~efoxwell/2P95-2016/code/09/slide21/howalarming.cpp`
 - `http://www.cosc.brocku.ca/~efoxwell/2P95/code/09/slide21/howalarming.cpp`
- Downloads the contents of those addresses, to directly compare them
- Displays *only* the contents of the diff (e.g. no 'progress bars')

Just attach your Bash script and submit it in Sakai.
